This Java code represents a basic command-line application designed for a fictional travel and adventure company called **TlouTrans**. Here's a breakdown of its purpose and functionality.

Purpose of the Code

The code aims to create an interactive console application that allows users to explore travel options for various African countries. Users can learn about different destinations and activities available in each country, making it suitable for anyone interested in booking a tour or adventure.

Below is the UML Class diagram

Company.Handle

Company

+CompanyName: String +CompanyNumber: int +CompanyEmail: String +CompanyLocation: String +Company()

+setVariables(): void

+showInformation(): void

HandleClient

+in: Scanner

+HandleClients(in:Scanner): void

+handleChoice(): void

+LesothoHandler(): void

+BotswanaHandler(): void

+EswatiniHandler(): void

+MozambiqueHandler(): void

+ZambiaHandler(): void

+MalawiHandler(): void

+MadagascarHandler(): void

+MauritiusHandler(): void

+TanzaniaHandler(): void
